ADOC International Co., Ltd.

Development and sales of DX infrastructure MOA signed by ADOC and Korean company TELADIN

Provide ICT solutions for advanced lifeline infrastructure operations in Japan

ADOC International Co., Ltd. (headquarters: Tachikawa City, Tokyo, CEO: Joji Kobayashi / hereinafter referred to as ADOC), which has carried out ICT engineering projects such as building telecommunications infrastructure, and TELADIN Inc. in Korea (headquarters: Seongnam City, Gyeonggi-do, CEO: Kim Joo Young / hereinafter referred to as TELADIN) have signed an MOA (Memorandum of Agreement) which confirms that both parties will promote development and sales of ICT solutions for infrastructure DX in the social and public field.

With this MOA, both companies will proceed with marketing and consider the details of collaboration, then they will develop and sell ICT solutions mainly for advanced lifeline infrastructure operations in Japan. This way, both parties will aim to solve the issues of social infrastructure.

Background of signing the MOA between both companies

While there are activities for DX to transform people's lives into better ones by introducing digital technologies, many problems are piling up especially in the social and public field. Issues such as shortage of human resources and aging infrastructure, have led the Ministry of Land, Infrastructure, Transport and Tourism and the Ministry of Internal Affairs and Communications to the proposed realization of "DX in the infrastructure field". There is a new trend which actively encourages the use of IT in the maintenance of lifeline infrastructure by utilizing cutting-edge technologies such as

5G/local 5G, IoT, sensor networks, cloud, AI, and big data analysis in order to promote DX infrastructure. The development and implementation of a wide variety of product services and solutions are happening now.

ADOC has provided advanced engineering services to the domain of 5G for major mobile carriers by leveraging the technical capabilities and know-how accumulated through the construction of telecommunication infrastructure among lifeline infrastructure. On the other hand, TELADIN has experience in providing solutions for local governments in Korea and will aim to create new values for users with cutting-edge telecommunication technologies which realize AI and IoT not only in Korea but beyond.

From this background, both companies identified the promotion of infrastructure DX in the social and public field in Japan as a business target. They evaluated each other's experience, technical capabilities, and achievements to facilitate its realization and aligned their goals, leading to the signing of this MOA.

Comments from Kim Joo Young, TELADIN CEO

"We are very honored to sign the MOA with ADOC. Through this MOA, we will make efforts together with ADOC to create a bright future and happy world."

Comments from Joji Kobayashi, ADOC CEO

"It is very meaningful that this time we can partner with TELADIN offering development and sales of systems with strength in implementing cutting-edge telecommunication technologies in Korea with high-level telecommunications infrastructure. Through the collaboration between both companies, we will promote realizing ICT solutions for social infrastructure DX in Japan."

About TELADIN

TELADIN Inc., headquartered in Seongnam City, Gyeonggi-do in Korea has developed systems specializing in the implementation of cutting-edge telecommunication technologies since its establishment in 2011. As a leading company in the field of wireless telecommunications, TELADIN is currently expanding its business domain focusing on 5G, IoT, LTE, and AI and the enhancement of global business.

Moreover, TELADIN has created a major movement in developing smartphones for children in Korea. On entering Japan, TELADIN has developed and sold AI customer analysis tools with telecommunication devices for stores.

About ADOC International

ADOC International Co., Ltd. has been in business for over 30 years since its founding, and has mainly carried out ICT engineering projects such as building telecommunications infrastructure and technical support including 5G areas for major mobile carriers, both domestically and internationally. As well as solutions related to the integrated management of cloud environments, big data, and

others, in recent years, we have focused on software quality verification under new development environments such as agile development and DevOps. As a domestic distributor of "Eggplant", which is getting a high reputation both domestically and internationally as an AI test automation tool, we have provided advanced testing services which consistently cover design, execution, and operation of automation.
